PROFESSIONAL SUMMARY

Data Engineer with hands-on experience building scalable batch and streaming data pipelines using Python, SQL, Apache Spark, Airflow, Kafka, Microsoft Fabric, and cloud data platforms. Experienced in ETL/ELT, data integration, data modeling, and analytics-ready data solutions.

TECHNICAL SKILLS

Programming: Python, SQL

Data Engineering: Apache Spark, PySpark, Apache Airflow, dbt, ETL/ELT, Batch & Stream Processing

Streaming & CDC: Apache Kafka, Kafka Connect, Kafka Streams, Debezium, ksqlDB

Databases & Warehousing: PostgreSQL, SQL Server, MySQL, ClickHouse, Snowflake, Oracle (Data Access & Extraction).

Cloud & Data Platforms: Microsoft Fabric, Azure Data Factory, ADLS Gen2, Synapse Analytics, Databricks, AWS

Data Modeling: Data Warehousing, Star Schema, Snowflake Schema, Dimensional Modeling

DevOps & Infrastructure: Docker, Docker Compose, Kubernetes, Terraform, Linux, YAML

CI/CD & Version Control: Git, GitHub, GitHub Actions, Jenkins, AWS CodePipeline/CodeBuild

Monitoring & Analytics: Prometheus, Grafana, Power BI

WORK EXPERIENCE

Data Engineering Project Collaboration— Gonbad-e-Kavus, Iran | Remote

Data Engineer | Jul 2026 – Present

- Developed and maintained data pipelines using PostgreSQL, Apache Spark, Kafka, Airflow, Docker, and Linux; implemented data ingestion, transformation, data quality, and incremental processing workflows.
- Supported pipeline orchestration, monitoring, troubleshooting, and data validation to ensure reliable delivery of data for downstream operational and analytical workloads.

TechLabs — Copenhagen, Denmark | Remote | Part-time

Data Engineering & Analytics Associate | Feb 2026 – Jun 2026

- Worked with Python, Pandas, Scikit-learn, and Streamlit to prepare, analyze, transform, and model structured datasets for data-driven applications.
- Applied data cleaning, feature engineering, analytical modeling, and interactive data visualization techniques to support business-oriented insights and solutions.

Negar Pardazan Alborz (Nepaco) — Tehran, Iran

Data Engineer / Data & Database Engineer

Sep 2020 – Nov 2023 | On-site | Full-time; Apr 2024 – Nov 2025 | Remote | Part-time

- Developed and maintained enterprise data integration and processing pipelines using Python, SQL, Oracle, PostgreSQL, Apache Spark, Kafka, and Airflow for operational and analytical workloads.
- Implemented ETL/ELT, data transformation, dimensional modeling, incremental processing, CDC, data quality validation, orchestration, and source-to-target reconciliation.
- Worked with batch and near-real-time data processing workflows to deliver reliable, analytics-ready datasets across enterprise systems.

ElmSanat — Tehran, Iran | On-site | Full-time

Data & Systems Engineer | Feb 2018 – Nov 2020

- Worked with system-generated and operational data using Python, Apache Spark, PostgreSQL, Kafka, and Linux; collected, parsed, structured, and analyzed logs and device events across distributed systems.
- Developed automated workflows for event aggregation, error analysis, system monitoring, and troubleshooting to identify recurring failures and operational issues.

Rayan Pouyan Yaran Pars — Tehran, Iran | Full-time

Data Integration Engineer | Aug 2015 – Nov 2017

- Worked with heterogeneous data sources including relational databases, applications, REST APIs, JSON/XML, and file-based systems using SQL, SQL Server, PostgreSQL, and Python.
- Supported data integration, system migration, and synchronization processes through schema mapping, data cleansing, validation, exception handling, and source-to-target reconciliation.

SELECTED DATA ENGINEERING PROJECTS

- **National-Scale Data Integration Pipeline — Project Collaboration**
Contributed to a platform integrating distributed regional data through ingestion, transformation, data quality, and incremental processing workflows.
- **Career Recommendation Data & Analytics Pipeline — TechLabs Copenhagen**
Developed a data-driven career recommendation solution using data preparation, feature engineering, machine learning, and interactive analytics to match user profiles with relevant career paths.
- **Insurance Data Integration & Analytics Pipeline — Nepaco**
Integrated customer, policy, claims, and payment data from multiple source systems into validated, analytics-ready datasets for insurance reporting and analysis.
- **Manufacturing Operations & Quality Data Pipeline — Nepaco**
Integrated production, machine, maintenance, and quality data to support operational performance, equipment reliability, and product quality analysis.
- **Banking Data Warehouse & Integration Pipeline — Nepaco**
Integrated customer, account, branch, and transaction data into analytics-ready dimensional models for banking reporting and analysis.
- **Real-Time Banking CDC & Event Streaming Pipeline — Nepaco**
Captured and processed database changes in near real time to synchronize operational banking data with downstream analytical systems.
- **CCTV Device Log Processing & Failure Analytics Pipeline — ElmSanat**
Built batch processing workflows for CCTV, NVR/DVR, server, and device logs using Python, Apache Spark, PostgreSQL, and Linux; transformed raw logs into structured data for failure analysis and operational monitoring.
- **Real-Time CCTV Event Streaming Pipeline — ElmSanat**
Built real-time streaming workflows using Apache Kafka and Spark Structured Streaming; processed and filtered critical device events for near-real-time monitoring and rapid detection of operational issues.
- **Multi-Source Enterprise Data Integration Pipeline — Rayan Pouyan Yaran Pars**
Integrated data from relational databases, business applications, REST APIs, JSON/XML, and file-based sources into standardized centralized datasets for downstream enterprise systems.
- **Legacy Data Migration & Reconciliation Pipeline — Rayan Pouyan Yaran Pars**
Migrated and synchronized legacy data across heterogeneous systems through schema mapping, cleansing, validation, exception handling, and source-to-target reconciliation.
- **Master Data Consolidation & Synchronization Pipeline — Rayan Pouyan Yaran Pars**
Consolidated and standardized master data across multiple business applications, resolving duplicate and inconsistent records and synchronizing validated data between operational systems.
- **Access Log Processing & Analytics Pipeline — Personal Project**
Parsed and transformed raw web access logs using PySpark DataFrame APIs; analyzed traffic, HTTP status, user agents, popular URLs, and high-frequency request patterns.
- **Modern End-to-End Data Engineering Pipeline — Personal Project**
Built an automated ELT pipeline integrating Neon PostgreSQL, Fivetran, Snowflake, dbt, and Databricks to transform source data into analytics-ready datasets.
- **Azure End-to-End Data Engineering Pipeline — Personal Project**
Built an end-to-end Azure data pipeline for ingestion, transformation, storage, and analytics using Data Factory, ADLS Gen2, Databricks, dbt, and Synapse Analytics.
- **Microsoft Fabric Retail Lakehouse Pipeline — Personal Project**
Built an end-to-end retail lakehouse for ingesting, transforming, modeling, and visualizing sales data using Microsoft Fabric, OneLake, PySpark, and Power BI.
- **Kafka-to-ClickHouse Real-Time Streaming Pipeline — Personal Project**
Built a real-time streaming pipeline to ingest Kafka events into ClickHouse for low-latency storage and analytical querying.

EDUCATION AND QUALIFICATIONS

- B.Sc. in Computer Engineering | Software Engineering
- M.Sc. in Industrial Management | Operations & Production Management
- PhD in Technology Management | Innovation Management
- Digital Shaper Certificate – TechLabs (Data Science Track, 2026)
- Machine Learning — IMT | Certificate of Completion | 2023
- Prøve i Dansk 2 (PD2) – Danish Language Certificate

Languages: Persian (Native) | English (Professional Working Proficiency) | Danish (PD2)
